

# DOYLE SYSTEMS GENERATION II CYCLONE DUST COLLECTOR

**BETTER EFFICIENCY WITH LESS MAINTENANCE**

*Over 15 times more filtration over panel type filters -- translates to less maintenance for achieving maximum vacuum performance.*

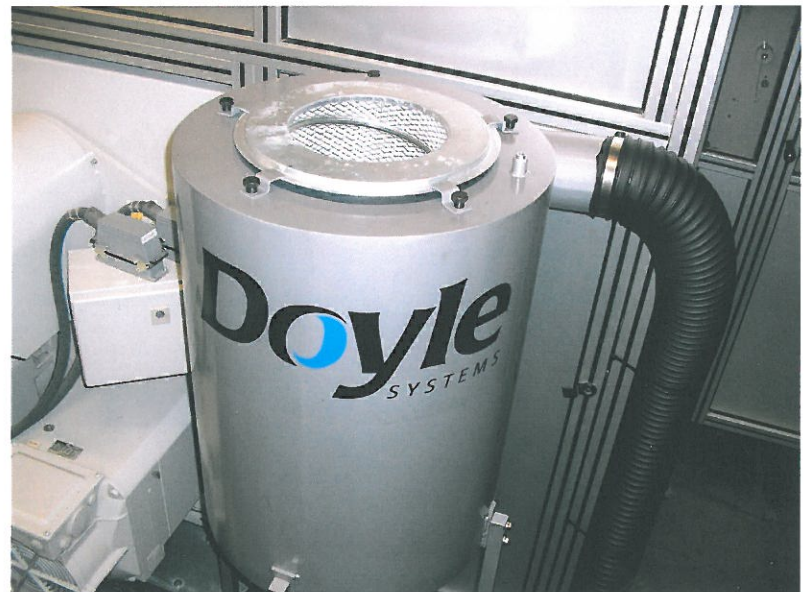

*Filter has 158 sq. feet of filter media.*

*The cartridge filter has up to 9 times more life over the old panel filters, resulting in long term cost savings.*

***Filtration of particles down to 5 microns.***

***With the pistol grip air purging wand the filter can be cleaned with "reverse air flow" technology, even while the system is in operation. Using more than 100 PSI of dry, clean compressed air the wand can quickly clear the filter to maintain maximum vacuum within the system.***

***The cylindrical filter is sealed by clamps at the top, preventing dust or debris from escaping into the plant environment.***
