CORPORATION

Performance for the long run.

## WIRE - WOUND RODS

# Buschman wire-wound metering rods are wrapped tight and hard to the core!

Buschman wire-wound metering rods start with the finest stainless steel rods, then are wrapped with stainless steel wire that is drawn through 100% all natural diamond dies. The result is a rod with amazing tensile strength, and precision sizing that produces a consistent, defect-free surface finish..

**Buschman wire-wound rods are also available with "double-wrapped" wire for higher coat weights.**

**Why throw away rods, when we can recycle them? Ask us about our "rewrapped rod program."**

### Wire-wound Rod Applications

Corrugated Coating Press  
Adhesives for labels, tapes & decals  
Glues for papers, boards, foils & films  
Pre-coat, base coat & top coat  
Hot stamp foils & wax  
Specialty & custom coating applications
